Chemcoaters Sustainability Statement

Chemcoaters supports the long-term sustainability of the metals supply chain and manufacturing industries. Metals producers are investing significant resources towards decarbonization of their processes. Our customers, metals consuming manufacturers, are focused on consumer demand for sustainable products.

The U.S. metals production and supply chain industries represent global leading, low, greenhouse gas (GHG) emissions intensity. At Chemcoaters, we are steel industry pioneers with unique knowledge and experience in research, coating development, and innovation offering quality engineered solutions. We have developed products over twenty years with a focus on improving the performance of steel sheet products while protecting the environment. Ultimately, our products are part of a supply chain serving our customers focused on sustainability.

Toward that end, we have embarked on a baseline GHG emissions accounting initiative, in accordance with the GHG Protocol, for purpose of further identifying opportunities for more efficient processes and service for our customers.

Through this initiative we have:

- Established a GHG emissions inventory process for a baseline calendar year of 2021, and follow up years of 2022 and 2023.
- Engaged our team in understanding the process and identifying opportunities for improvement.
- Prepared to support opportunities aligning with our customer's expectations and as well, developing regulatory standards, both domestically and globally.

Through three years of accounting, we have established:

- An average direct emissions intensity of approximately 2.47 mtCO₂e/100 tons of steel processed for our customers.
- Renewable power supply of approximately 7% represented by our eGRID Subregion.

In the years ahead, we will continue refining our sustainability initiative with objectives to:

- Identify opportunities represented by both process and technology to improve on our energy efficiency and subsequent reduction in GHG emissions.
- Be a valued supplier for our customers in support of their supply chain carbon footprint data and target requirements.
- Continue to bring innovative products and solutions to the market providing for lower carbon footprints.
- Maintain a commitment to responsible water management practices, ensuring efficient use and conservation.

All aspects of sustainability are important for Chemcoaters. We welcome inquiries from our customers in this regard. Together we will continue to build on our long history of success behind the support of our customers and the growth of our company.
